

Master Content Reconciliation Notes

Maintainer record of source conflicts, missing material, and current app choices. These notes do not replace the original documents. Confirm unresolved rules with the DM.

12 recorded source issues

1. Sanity (Max Sanity / Sanity Die)

The canonical Player's Handbook Ch.2 Core Traits (read directly from the PDF) differ from the standalone class boards (per-class PDFs + 'Classes Boards for send' CSVs, captured in `classes[].coreTraits`) for several classes. The app's data (`src/data/classes.ts` via `gen.py`) follows the handbook values. Confirm with the DM.

Per-class values

Class	Handbook	Classboard
brute	12 / 2d6	12 / D12
scout	12 / 2d6	12 / D12
stalker	12 / 1d12	10 / D10
deepcaller	16 / 1d20	20 / D20
bloodbound	20 / 1d20	18 / D12
warden	14 / 4d4	15 / D12

2. Stalker Hit Die

Standalone Stalker board/CSV list D10; the Player's Handbook Class Overview lists D8. CLAUDE.md resolves to D8 (5e Rogue basis). `classes[].coreTraits` preserves the verbatim D10.

3. Bloodbound saving throws

Standalone Bloodbound board lists 'Intelligence and Wisdom'; the Player's Handbook Class Overview lists Strength + Constitution. CLAUDE.md resolves to STR/CON. `classes[].coreTraits` preserves the verbatim source value.

4. Class starting equipment

The handbook's Class Overview Part 1 defers equipment to 'See chapter 2'; the authoritative per-class equipment lives in `classes[].overview.startingEquipment / coreTraits`. Exact counts (blood vials, bullets, daggers, hunting traps) differ between the handbook overview, the Ch.2 Core Traits, and the standalone boards for every class. The current handbook's Ch.2 Core Traits tables give the verbatim lists recorded in `handbookCh2CoreTraits` below; the app (`src/data/classes.ts`) mirrors them for every class EXCEPT the Scout, whose Ch.2 list says 'Shortsword' and 'Bullets (20)' where the older boards (and the app) say Hunter Cleaver (a unique Scout item) and 18 bullets - confirm with the DM before changing the Scout.

Handbook Ch. 2 core traits

Class	Recorded value
Brute	Greatsword, Shortsword, Bloodvial (1), Toolbelt and Rope
Scout	Hunter Rifle, Shortsword, Bloodvial (1), Bullets (20) Toolbelt, Bandolier and Pistol
Stalker	Scimitar, 4 Daggers, Pistol, Bullets (5) Toolbelt, Ankle Holster and Thieves Tools

Class	Recorded value
Deepcaller	Sickle, Dagger, Bloodvial (1), Toolbelt Book of the Deepcaller and Deepcallers Robe
Bloodbound	Greataxe, 2 Handaxes, Blood-drainer's Tools, Blood Vials (4), and Tool Belt
Warden	Hunter Rifle, Longsword, Navigators Tools, Bell, 1 Hunting Trap, Tool Belt, Bandolier, Bullets (14)

5. Hunter Cleaver - no weapon stats

The weapons tables define no damage/properties for the Hunter Cleaver (unique Scout starting item). The app's weapon-damage table (issue #139) ships it with damage "-" and the note "stats set by the DM". Confirm the real stats with the DM and add a weapons row here when ruled.

6. Beast Caller - Deepened Pact feature level

The current handbook (PDF p.32) prints 'LEVEL 3: DEEPENED PACT', but the standalone Scout board (Scout.txt) prints 'LEVEL 7: DEEPENED PACT' and the Hunter Scout Features table grants Subclass Features at levels 7/11/15 (Pact with a Beast is already the level-3 feature). App + master keep level 7; the handbook's 'LEVEL 3' looks like a typo. Confirm with the DM.

7. Warden level-1 feature name - 'Feel Your Enemy' vs 'Sense Your Enemy'

The Hunter Warden Features table (and the older sources) call the level-1 feature 'Feel Your Enemy', but the feature heading in the current handbook (line 1883) reads 'LEVEL 1: SENSE YOUR ENEMY'. The feature text is identical. App + master keep 'Feel Your Enemy' (matching the features table). Confirm the intended name with the DM.

8. Marksman - Trained Pistol properties (Loading)

Older extracts of Deadly Rifleman listed the Trained Pistol's properties as 'Ammunition (Range 30/90; Bullet), Light, Loading'; the current handbook (lines 1076-1088) lists only 'Ammunition (Range 30/90; Bullet) Light' - no Loading (plausibly intentional: a trained shooter ignores Loading). App + master now follow the current handbook. Confirm with the DM.

9. Rite type naming - 'Teleportation Rite' vs 'Traversal'

The handbook's Types of Rites table (line 1545) lists 'Teleportation Rite', while the standalone rite-school PDFs (and the app's RiteType/rites data) use 'Traversal'. Same category; record only - confirm the canonical name with the DM.

10. Armor of Agathys renamed to Armor of The Drowned Star

The current handbook names the rite 'Armor of The Drowned Star' (Zealot feature 'Carved Armor of The Drowned Star', line 1581) and rites.bookOfDeepcaller carries the renamed rite; the standalone Protection Rite PDF (mirrored verbatim in rites.bySchool) still says 'Armor of Agathys'. The unified Codex shows both source versions separately; master's prestigeClass uses the Drowned Star name while bySchool keeps the verbatim older source.

11. Call Starborn Horror - Madness values (standalone Summoning Rite PDF vs V1.0 Book of The Deepcaller)

The two sources disagree on all four Madness figures for the Level 9 Summoning Rite 'Call Starborn Horror'. The standalone Summoning Rite PDF (mirrored verbatim in `rites.bySchool` and `resources/extracted/content.json`) gives the LOWER figures: on a failed save a creature suffers 6 Madness; on a success 2 Madness; each other creature that sees or hears the Horror suffers 2 Madness; the caster suffers 6 Madness. The (presumably newer) V1.0 Book of The Deepcaller (mirrored verbatim in `rites.bookOfDeepcaller`) gives the HIGHER figures: 10 / 5 / 4 / 10 respectively. The Mind damage (10d10), the Frightened condition and the 5-round duration are identical in both. The unified Codex shows both source versions separately. Confirm the canonical figures with the DM; if the Book of The Deepcaller wins, update `resources/extracted/content.json` and `master.json` `rites.bySchool` to 10/5/4/10, then regenerate the Codex. Do not change unilaterally.

12. Lesser Starborn / Starborn Horror stat blocks + Starborn Horror Behavior Table - missing from source

Three Summoning Rites reference creature content that does NOT exist anywhere in the source corpus (extracted text, `content.json`, `master.json`, and the V1.0 Book of The Deepcaller / V1.0 Whispers appendix PDFs only REFERENCE it, never define it): 'Call Lesser Starborn' (Level 6) uses the 'Lesser Starborn stat block'; 'Call Starborn Horror' (Level 9) uses the 'Starborn Horror stat block' AND rolls each turn on a 'Starborn Horror Behavior Table'. None of these three (the two stat blocks or the behavior table) are defined in any source - the only complete creature stat block in the whole corpus is the Hound of Tindalos (embedded in the Scout 'Pact with a Beast' feature). A Deepcaller cannot actually resolve either summoning rite without them. These must be sourced from the DM; do not invent numbers. When provided, encode the stat blocks the way the Hound of Tindalos block is embedded in `classes.ts` (size/type, AC, HP, Speed, ability scores + saves, senses, traits, actions) and the Behavior Table as a searchable d-roll table.
